

Astera Secure

We're committed to providing our members with solutions that provide more security. How? With something we call, Astera Secure. Astera Secure features three amazing solutions that help combat fraud at the highest level.

Chip Cards (EMV Technology)

A chip card (EMV technology) is a global standard for credit cards and debit cards that use computer chips to authenticate (and secure) chip card transactions. Each card has a microchip that stores and protects your information better than before, making fraud and identity theft more difficult than ever.

So what makes chip cards more secure? The simple answer is the microchip in chip cards. Account information stored on these cards is encrypted uniquely each time it is accessed. Because of the unique encryption, this makes it much more difficult to be counterfeited.

CardNav by CO-OP

Introducing unprecedented, real-time control over your debit cards through your smartphone or tablet. CardNav adds another level of security to your cards by letting you decide how and when they can be used, and alerting you when any types of transactions you specify take place. You can even use CardNav to set personal spending limits that help you stay within your budget goals.

- Turn cards on or off in seconds
- Use GPS to restrict transactions to businesses within a designated area
- Limit card use to specific merchants or purchases
- Receive real-time, in-app alerts that let you stop unauthorized purchases before they're complete
- Received alerts when you're getting close to any personal spending limits you've set.

Download the CardNav by CO-OP app on your apple or android device, and gain a new level of security and control over your money today.
